

DIABETES

tyent BENEFITS

People in the UK are suffering from diabetes more than ever before, according to the NHS diabetes affects approximately 2.3 million people with at least another half a million people who are unaware they have the condition.

Diabetes occurs in the body when the pancreas fails to produce an ample amount of insulin. Though there is no cure for diabetes, it can be managed by keeping blood sugar levels close to normal. Some healthy habits can aid in the retention of normal blood sugar levels such as exercising, taking proper medications, eating the right foods and drinking alkaline ionized Tyent Water™.

Tyent Water™ helps to produce an environment within the bloodstream which could assist the pancreas into resuming normal function.

Dr. Won H. Kim, whose background includes a doctorate from Oxford University in biochemistry, is a professor at Yonsei University Medical School in Seoul, South Korea. In his book *Water of Life*, he reports as follows regarding trial results: "In less than one month the blood sugar levels of the group drinking alkaline water had amazingly decreased in contrast to those of the insulin injection group. Daily fluctuations in blood sugar continues to occur in the case of the insulin group, while those drinking alkaline water maintained remarkably stable levels"

Keeping blood sugar within a normal range by adopting healthy habits, including properly hydrating the body by drinking Tyent Water™, may significantly help balance your body's pH. In addition, forming these habits could quite possibly lower your chances of developing other problems such as dehydration, kidney disease, chronic fatigue, frequent infections, heart attack, strokes, etc...

Controlling your diabetes is in your hands. The more you know and understand how diabetes occurs, the more power you will have to fight it and live a healthy and happy life.

Prevention is the key! Most people don't fully appreciate their health until they lose it. As said by Dr. Alvin Stein MD, FACS, "Acidosis is the only true disease and everything that makes us sick is simply a by-product of acidosis."

If you are healthy now, then drink alkaline Tyent Water to help you stay healthy through prevention.

However if your health is currently less than perfect, then take one of the shortest paths to recovery by drinking alkaline Tyent Water.

It's a pretty simple decision. Save thousands of pounds on bottled water; reduce plastics going into landfills and improve your health all at the same time.

Drinking alkaline Tyent Water is the single most productive thing you can do for your health.

Yes, there is a better road to achieve the benefits that you need for a healthier lifestyle.

Call Tyent UK today and get on the road to better health now
